

Introduction to Git, GitHub & Version Control

git

GitHub

Agenda

- What is Git & GitHub?
- Understanding the core Concepts.
- Working with Local & Remote repositories.
- Design & Host Portfolio

What is Version Control?

- Time
- Who took it
- Location

Version Control Systems (VCS)

Centralized
(CVCS)

Distributed
(DVCS)

Most Popular Version Control Systems

- Git
- Subversion
- Mercurial

How to get Git?

MacOS / Windows

Go to git-scm.com/downloads

Download the software for Mac/Windows

Install Git, choosing all of the default options

Linux

```
$ sudo apt-get install git
```

[git-cheat-sheet-education \(github.com\)](https://github.com/mmsalmanfaris/git-cheat-sheet-education)

First-Time Git Configuration

sets up Git with your name

```
git config --global user.name "<Your-Full-Name>"
```

sets up Git with your email

```
git config --global user.email "<your-email-address>"
```

ensures that Git output is colored

```
git config --global color.ui auto
```

Working with a Local Repository

- Create a Git Local Repository.
- Make Changes, add, and commit them.
- Review the repository's history.

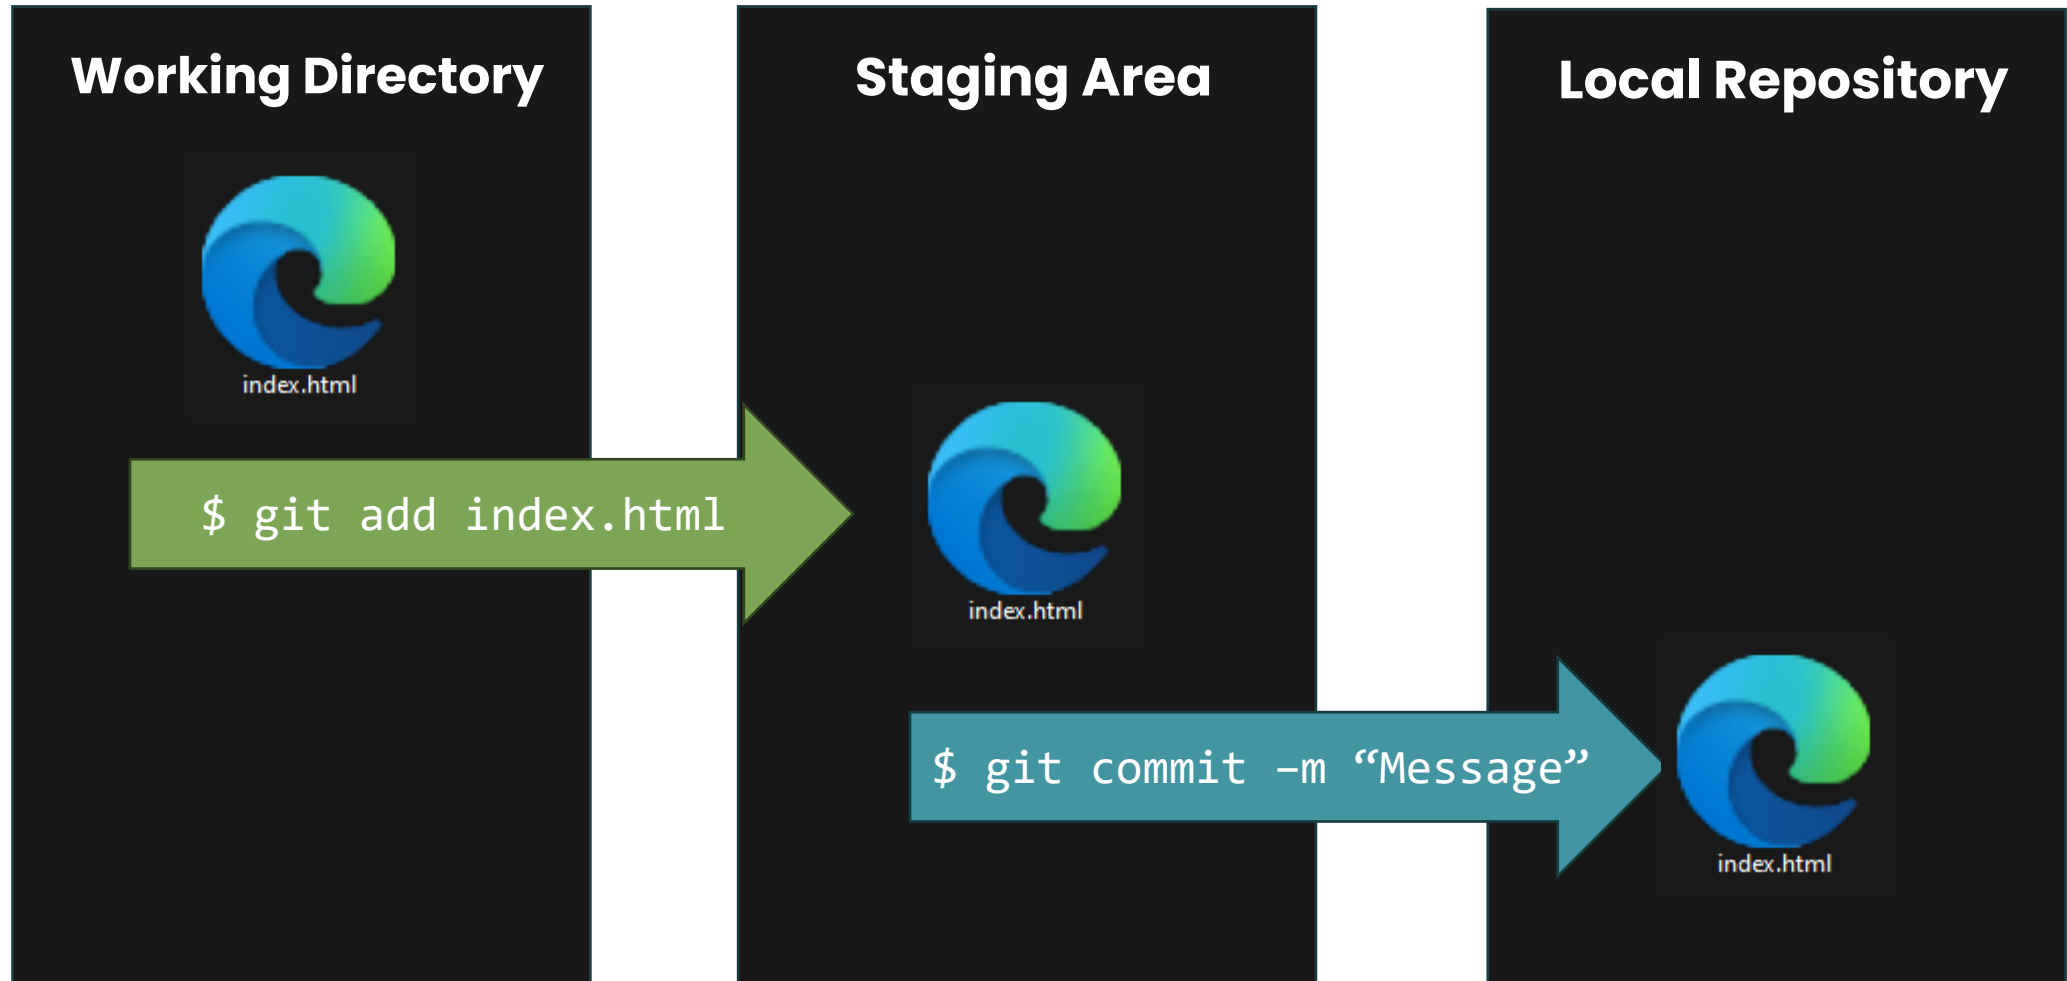

Initializing a Local Git Repository

```
$git init
```

Common terminal commands

```
$ls      - used to list files and directories  
$mkdir   - used to create a new directory  
$cd      - used to change directories  
$rm      - used to remove files and directories  
$pwd     - used to print working directory  
$touch   - used to create and modify files  
$start   - used to open files or directories
```

How does Git work?

Git Add

```
$ git add <file1> <file2> ... <fileN>
```

```
$ git add .
```

This command moves your changes to the staging area.

Git Commit

```
$ git commit -m "Initial commit"
```

This command moves your changes to the local repository.

Try to always write your commit message imperatively.

Reviewing the Repository's History

```
$ git status
```

On branch master

Your branch is up-to-date with 'origin/master'.

There is nothing to commit; the working directory clean

This command displays the status of the working directory and the staging area.

Reviewing the Repository's History

```
$ git log
```

This command will show you the history of changes in the repository.

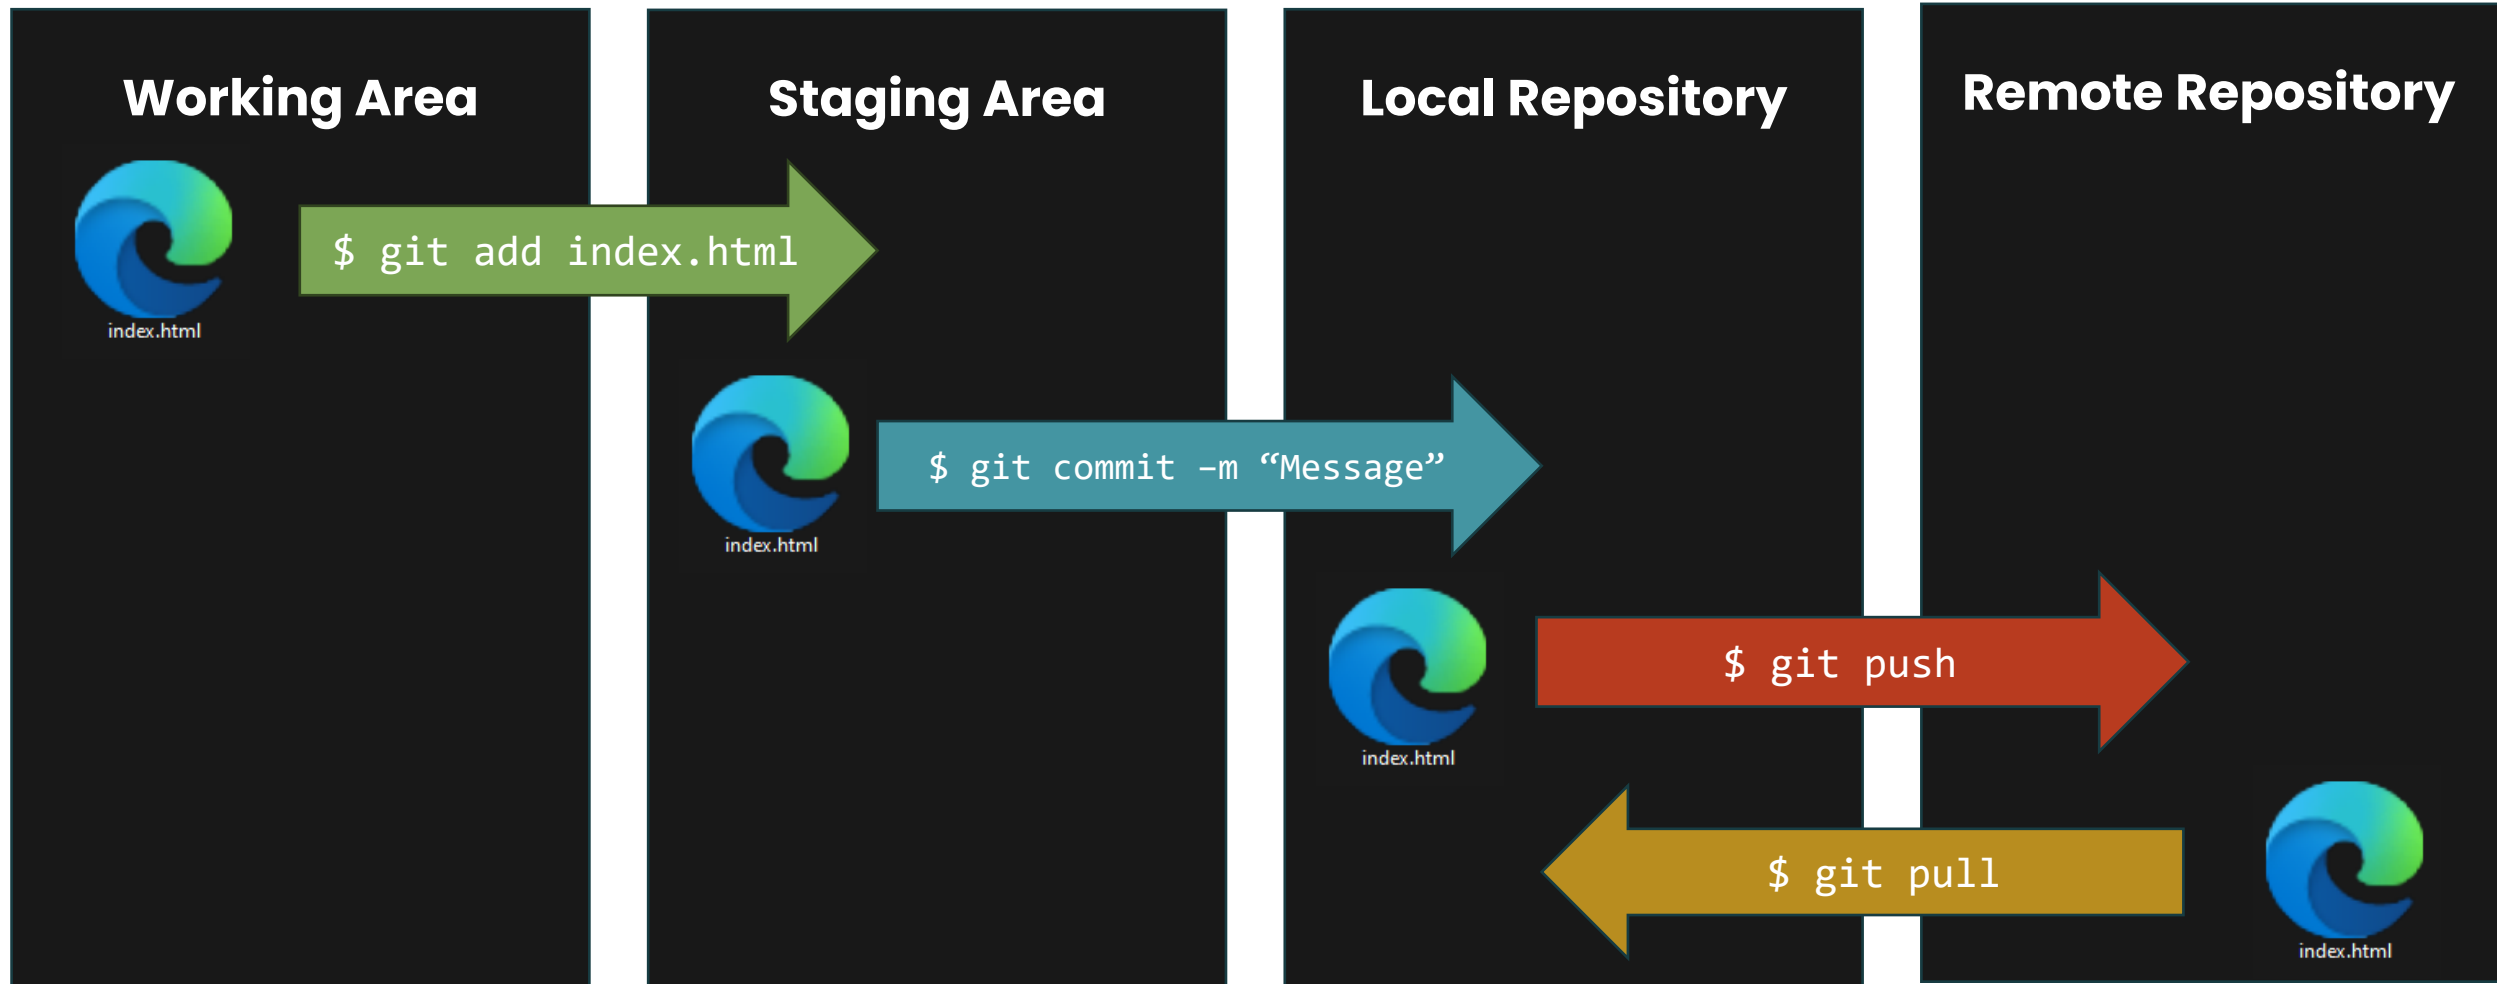

- the SHA
- the author
- the date
- the commit message

```
$ git log --oneline
```

Working with a Remote Repository

- Create a GitHub repository and clone it.
- Make changes and push to GitHub.
- Make changes and pull from GitHub.
- Fork a repository and make a pull request.
